***Fast Ordering and Shipping Of Popular Thermal Flow Meters for Air, Natural Gas, Biogas, Digester Gas, Flare Gas; and Flow/Level Switches for Air/Gas, Liquids and Level Interface***

**San Marcos, CA** — Busy engineers, as well as purchasing managers, will find the convenience of the [FCI Online Store](#) simplifies the process of ordering and expedites the delivery on a wide range of the most popular configurations of FCI thermal flow meters, flow and level switches and their accessories manufactured by [Fluid Components International \(FCI\)](#).

The FCI Online Store features a curated selection of meters and switches in configurations suitable for common process and industrial plant applications. These include flow meters to measure air, compressed air, natural gas and biogas in pipe diameters from 1 inch to 8 inches. The flow and level switch products include general purpose solutions for water and liquids, and for air and gas flow detection. Products available from the FCI Online Store are typically in-stock and ship within 1 to 2 business days after submitting an order. The online store requires purchase with a credit card and is available to USA customers only.

According to Adam Schleyhahn, FCI's Director of Sales & Marketing, "Our online store provides customers with an easy to use portal to purchase a number of high quality, reliable, precision FCI flow and level measurement solutions for urgent process and plant needs."

Thermal flow meters available from the FCI Online Store perform the mass flow measurement of air, compressed air, natural gas, and biogas. Choices range from the economical, compact ST50 and ST75 Series Flow Meters to the premium featured Model ST80 Flow Meter.

All the thermal flow meter models available from the online store are pre-calibrated for the specific air/gas, include a digital display/readout option and carry FM/FMc agency approval. Users who have an application and/or installation with requirements different than these products available in the online store will find easy access to information about additional models, product literature, and technical sales assistance are all readily available at FCI's main web site. And for non-USA customers, the site offers a complete listing of FCI's international distributors and sales partners by country throughout the world. Also available from the FCI Online Store are the company's thermal-technology liquid and air/gas flow switches and liquid level switches. They are recognized around the globe for their dependability and

durability in industry's most rugged and demanding environments. Switch models available in the online store the economical, compact FS10i, the special purpose analyzer and sampling systems flow switch model FS10A, and FCI's worldwide leading industrial-grade FLT93 Series. All models offered carry FM/FMc agency approval and SIL compliance rating.

Detailed information on all of these meters or switch models, including complete specifications and applications guidance, and access to the Online Store are available on FCI's main web site. FCI's expert application engineers, sales associates and local manufacturers' representatives are available to answer questions and can help direct users to the best solution to ensure their application's success.

Customers outside the USA who wish to place an order can contact their local country sales team from FCI's extensive global network of distributors. Pricing provided by FCI's international distributors will also include local country import duties, local taxes (e.g. VAT), international freight and fees, as well as support for purchases with warranty and post-sale support service.

For six decades FCI has been a world leading manufacturer of sensors and instrumentation solutions for industrial processes and plant operations, on-board aircraft and nuclear power plants applications. For each of these segments, FCI offers an array of products with superior performance and quality, longest service life and with the pedigrees and certifications that meet or exceed the industry norms and the application conditions.

FCI solves flow and level measurement applications with advanced thermal dispersion technologies. With 60 years' experience and the largest installed base of thermal flow meters, flow switches and level switches, count on FCI to know your application and have the solutions.
